National Kidney Foundation of Illinois
Financial Report 2013

Prevention
The National Kidney Foundation of Illinois is committed to providing quality initiatives in Illinois that meet the needs of patients, healthcare professionals and communities that are most at risk for kidney disease.

Through the KidneyMobile® program, the National Kidney Foundation of Illinois is able to reach individuals at risk for developing kidney disease throughout the entire state. Since its inception, this program has screened more than 41,000 Illinois residents for kidney disease, diabetes and high blood pressure. When diabetes and high blood pressure are diagnosed early and treated appropriately, coupled with healthy lifestyle changes, kidney disease can be delayed, and more importantly, kidney failure may be prevented.

Education
More than 1.1 million people in Illinois have kidney disease but most are unaware of it. The National Kidney Foundation of Illinois provides educational materials and seminars to patients, family members, healthcare providers and the general public in an effort to reduce the prevalence of - and eventually eliminate - this devastating disease.

Through patient programs like Living with Kidney Disease and Your Kidneys & You, professional programs such as the Interdisciplinary Nephrology Conference and Controversies in Nephrology, a wide array of educational materials, and a comprehensive website, the National Kidney Foundation of Illinois is a leading resource for information on kidney disease and its precursors.

Empowerment
The National Kidney Foundation of Illinois has a comprehensive follow up program to ensure that those who receive abnormal test results (approximately 80% of those screened have at least one abnormal test result) through the KidneyMobile® program are getting the care and treatment they need. Participants are followed up with by National Kidney Foundation of Illinois staff, and if additional treatment is needed, they are referred to a local health clinic, hospital or Federally Qualified Health Center (FQHC). Additionally, the staff of the National Kidney Foundation of Illinois provides information on resources such as transportation, health insurance, Medicaid and other public benefits, as well as many other social support services. The National Kidney Foundation of Illinois also provides telephone support to those who have questions regarding the prevention and treatment of kidney disease, diabetes, high blood pressure, transplantation, organ donor awareness and dialysis treatment.
